SUMMARY

AI engineer with one year of production experience in computer vision and generative AI, and a master's researcher in retrieval-augmented translation — first-author paper accepted at CSoNet 2026 (Springer LNCS). I ship models as working services: detection, re-identification and tracking on Dockerised GPU workers, FastAPI automation, and an LLM-judge evaluation framework. Open to AI engineering work in Vietnam or remotely.

EXPERIENCE

Aimesoft Oct 2025 – Present
AI Software Developer – Computer Vision, Automation, Docker *Ho Chi Minh City, Vietnam*

- Delivered two client systems end to end for Japanese clients (detailed under Projects): a multi-camera people-counting product, where I own the computer-vision core, and an AutoCAD drawing-generation service. Client work is under NDA.
- Own the delivery path: Dockerised GPU workers, MySQL/S3 storage, preview/review APIs, GitLab CI packaging and vision prototyping.

FPT AI Center Oct 2024 – Jan 2025
Intern – Generative AI, LLMs *Vietnam*

- Built RAG pipelines on Claude Haiku 3.5 for question-answering systems, and researched contradiction resolution in Japanese–English translation.

COTAI – Center of Talent in AI Jul 2022 – Dec 2022
AI Trainee – Machine Learning & Computer Vision *Vietnam*

- Applied GradCAM to lung-image classification, and trained CNNs and diffusion models with Transformer backbones.

PUBLICATIONS

H-M-T. Nguyen, P. Paderno, D-L. Vu. **Component-Level Ablation of Dynamic Retrieval-Augmented Generation for English–Vietnamese Literary Translation.** *CSoNet 2026* (Springer LNCS). Accepted, to appear, Nov 2026.

First author. Staged component ablation on an 8B open model with more than 12,000 pairwise LLM judgments and a blind two-rater human study (n=501); the pipeline raised the decisive win rate against Google Translate from 20.0% to 38.2%.

PROJECTS

DynamicRAG – LLM Translation Pipeline & Judge Evaluation Framework *2025 – 2026*
Master's thesis, VNUHCM – UIT
Dynamic retrieval-augmented translation of literary English into Vietnamese on an 8B open model: translation memory over LaBSE embeddings, typed glossary, coreference-aware retrieval with fastcoref, and a name/script hygiene layer. I also built its evaluation stack — pairwise LLM judging with candidate-order swapping, cluster-bootstrap intervals, Holm correction and a blind human study.

ArtFreak – AI People Counting & Zone Analytics *2025 – Present*
Multi-camera people counting turning event and showroom footage into hourly visitor metrics (zone occupancy, line-in/line-out, rotation, dwell time). I built the YOLOX detection, FastReID/Swin-Base re-identification and ByteTrack/Kalman tracking, deployed as Dockerised GPU workers.

Nishio – AutoCAD DXF/DWG Drawing Generation *2025 – Present*
Generates complete interior drawing sets (A3 presentation, A1 planning, A2 standard frame) from room geometry and furniture catalogues, replacing manual drafting. I built the FastAPI + ezdxf backend, the DXF/DWG export, and the Docker/GitLab CI packaging.

EDUCATION

VNUHCM – University of Information Technology (UIT) *Aug 2023 – Present*
Master's Student – Computer Science (Artificial Intelligence & Computer Vision)
Thesis: component-level ablation of dynamic RAG for EN–VI literary translation (first-author paper, CSoNet 2026).

VNUHCM – University of Science × Auckland University of Technology *2018 – 2022*
B.A., Computer & Information Science – GPA: 3.94/4.0

SKILLS & LANGUAGES

Languages:	Python (primary), C/C++; Vietnamese (native), English (IELTS 6.5 / VSTEP B2)
ML / Vision:	PyTorch, TensorFlow, Scikit-learn, OpenCV, YOLOX, FastReID, ByteTrack, GradCAM
LLM / GenAI:	RAG, LLM-as-judge evaluation (position swapping, cluster bootstrap, Holm correction), LaBSE, fastcoref, Claude Haiku 3.5, GPT-4o vision
Engineering:	Docker, Git, GitLab CI, FastAPI, ezdxf, Nginx, MySQL, AWS S3
